

1 ABSTRACT

2

3 A package comprising an elongated housing and a handle-
4 based delatching mechanism fixedly attached to the elongated
5 housing wherein the handle-based delatching mechanism includes
6 a slide fixedly attached to a handle, the handle being fixedly
7 attached to the elongated housing at a pivot point for movement
8 between a closed position and an open position wherein the
9 elongated housing includes a track for receiving and guiding
10 the slide when the handle is moved between the closed position
11 and the open position and wherein a portion of the slide is
12 positioned in abutting engagement with spring fingers when the
13 handle is in the open position and the elongated housing is
14 positioned within a rack.
